

SG Helmets Announces Rebrand To LIGHT Helmets

New ownership group and rebrand highlights focus on maldng significantly lighter, safer football helmet to help minimize injuries and maximize player safety and performance.

CARLSBAD, Calif. (PRWEB) Janualy 18, 2019 – On September 1st, 2018, Safer Spmis, LLC acquired the assets of SG Helmets, the 5th largest manufacturer of football helmets in the world and a longtime leader in sports helmet safety technology. Safer Sports, LLC today announces that it is rebranding as "LIGHT Helmets." LIGHT Helmets' first product will be a completely redesigned football helmet (the LSI) using much lighter, yet stronger materials for both the outer shell, liner, and face mask from technology and manufacturing techniques used by the militaly as well as the aviation and auto racing industries. It is set for release in the spring of 2019.

"Football and other contact sports are being heavily scrntinized today - by worried parents, players at all levels, and anxious league executives - over player safety and concussion concerns," said Nick Esayian, CEO of LIGHT Helmets. "By significantly cutting helmet weight while exceeding professional league safety standards, LIGHT Helmets is able to provide key performance and safety advantages to football players of all ages and abilities. Our goal is to build the safest football helmet available on the market while allowing the athlete on the field to perform better by carrying significantly less weight."

LIGHT Helmets will build and improve upon decades of innovation by SG Helmet's founder Bill Simpson that began with work that helped to revolutionize auto racing indushy safety in the late 70s. In 2011, Simpson applied that same technology to create a safer, more performance-oriented football helmet, given the rise in awareness related to head injuries and concussions in the game. To date, SG Helmets have been worn by thousands of players at all levels of football, including the NFL, NCAA, arena football, high school teams, and Pop Warner.

"We know that traditional helmets continue to get heavier and heavier as they are designed to pass the tests," said Dr. Tal David, Former Head Physician of the San Diego Chargers and Light Helmet's Advis01y Board Member. "But, we also see the number of concussions has not significantly declined."

LIGHT Helmets aims to continue Simpson's vision and revolutionize football helmet technology by focusing on the use of materials the aviation, militaly, and auto racing industries have pioneered. These innovations amount to a significant reduction in helmet weight, up to 60 percent compared to some competitive helmets. While the majority of football helmets used today weigh between four-to-six pounds, LIGHT Helmets' football helmet will weigh just over two-and-a-half pounds depending on how they are configured.

"The more weight you put into impact, the more kinetic energy is generated and the more potentially dangerous those impacts become," said Justin Bert, COO at LIGHT Helmets. "Our focus on reduced weight will not only improve player perfimmance, but also reduce fatigue and injury. Football deserves this helmet and in the coming months we will be transitioning this same technology to other contact sport helmets."

LIGHT Helmets has a diverse advisory board - including physicians who have worked within the NFL and motorsports - as well as those who have worked in the business of professional football.

After an initial focus on lightweight football helmets, LIGHT Helmets will expand its product offering to other

contact sports where player safety and perfonnance can be increased, such as lacrosse, baseball, and hockey. LIGHT Hehnets also has plans to revolutionize hehnets for a wide range of professional industries.

LIGHT Hehnets' first hehnet, the LS!, will be released in the spring of 2019. More information can be found at www.LightHelmets.com.

About LIGHT Helmets

<u>LIGHT Helmets</u> (fom1erly SG Hehnets) produces lighter, safer, more perfo1mance-oriented helmets for football and other contact sports and is cunently the fifth largest football helmet producer in the country. Our mission is to better protect the players and their games through lighter and safer helmets that use the best materials and technology available. LIGHT Helmets empowers players at all levels to maximize their potential and enjoyment of the game by equipping them with the most innovative helmets available on the market.
